Abstract

This is the last part of the paper that will be written after everything else has been completed.

1 Introduction

This paper is organized in the following way: first there will be a brief introduction whose purpose is to frame the majority of our arguments in a manner that will provide meaningful context throughout the duration of the paper. Second we introduce some of the primary topics that will be covered in the heart of this paper. The next portion of the paper deals with specific examples of our broad claims in the introduction, as well as a case study to support each argument. Finally we will conclude our paper with an examination of the evidence we presented and a discussion of how our claims were supported.

We will begin by examining protocol's and their diverse roll in the common marketplace. The purpose of any protocol is two fold: first it is supposed to help new business enter the market since there has already been an established precedent to follow, secondly it is to allow the work of multiple businesses to flow together seamlessly.
